Important: Many times, models like **zai** do not return an executable langchain prompt. Instead, they return a function call with its parameters, leaving the execution to the client. In most cases, the pipeline itself works correctly.

To handle this behavior, we can add a **local adapter** specifically for these models. The adapter would convert the returned function call and its parameters into an executable prompt or directly execute the corresponding action, ensuring compatibility with the existing pipeline without requiring changes to the rest of the system.

New prompt1 : detect the outer circle of the bright vacuum gripper.

New prompt : detect the OUTER Boundary of the small bright circular vacuum gripper ring. Do NOT detect the inner hole. DO NOT detect the inner bright edge . Do NOT detect the large dark outer shadow/background
